

PRODUCT SPECIFICATION

Garden Blend

General Description

Garden Blend is our all purpose compost-based soil and the most commonly used soil amendment in the lower mainland since 1993. Garden Blend consists of approximately 75% compost (Soil Amender) screened through a 3/8" screen and approximately 25% river sand mix, per volume. Our compost is produced by our unique proprietary composting process where temperatures exceed 55°C for several weeks to kill weeds, weed seeds and pathogens. Garden Blend contains our high quality soil amender that contributes significantly to sustained soil fertility, superior soil structure, and provides growth stimulants to plants and porosity to improve soil drainage. Garden Blend is ready to use on all types of outdoor plants, flowers, trees and shrubs, vegetables and for low traffic lawn areas.

C/N ratio	< 28
pH	6-7
Lime requirements*	0
EC (dS/m)	<3
Sand Classification**	
Gravel (%)	0-5
Sand (%)	75 – 80
Silt and Clay (%)	5 – 10
Organic Content (%)	10 – 15
Nitrogen (%)	0.3 – 0.5
Phosphorus (ppm)	100 – 250
Potassium (ppm)	1,000 – 1,500
Calcium (ppm)	1,500 – 2,000
Magnesium (ppm)	400 – 500

Table indicates typical ranges.

* lbs dolomite lime/ 1,000 ft²

** based on dry weight

Product Use

Vegetable and Flower Gardens: Remove weeds and slightly roughen the surface. Apply a 2"-8" layer of Garden Blend. Rake or roll to achieve proper grade, then irrigate generously prior to planting.

New Low Traffic Lawn Areas: Remove weeds and slightly roughen the surface. Apply a 2"-8" layer of Garden Blend. Rake or roll to achieve proper grade, then irrigate generously and apply a phosphorus rich fertilizer (10-30-10) and seed or sod.

Product Specifications

- Particle size: compost screened through a 3/8" screen.
- Typical ranges of chemical and physical properties listed in table to the left.
- Soil settles approximately 15%.
